

Document of conformity

The company

HUGO VOGELSANG GmbH & Co. KG

showed for the sites listed in the Annex,

that the accounting methodology of greenhouse gas reductions for specific product carbon footprints (PCF) provided for in the CO₂ balance model is based on valid assumptions and evidence from upstream suppliers, that mass balancing is carried out correctly and that double counting can be excluded.

The following processes are included in the CO₂ balance model:

- ▶ Use of CO₂-neutral hydrogen as a substitute for natural gas
- ▶ Use of regeneratively generated electricity
- ▶ Use of CO₂-reduced input material with reliable external confirmations

The respective greenhouse gas reductions are exclusively assigned to the associated process steps within the life cycle stages of the products and could not be used to reduce or offset other emissions.

There is no physical allocation between purchased materials and generated products. The compliant implementation of mass balancing is audited annually by GUTcert.

Further assumptions and descriptions are contained in the "Leitfaden des CO₂-Bilanzmodells der Unternehmen der BILSTEIN GROUP" (as of 09/03/2023).
